03 PandaFury Token

Binance Smart Chain (BSC) was developed as a means of utilizing solidity-based smart contracts with much greater speed and efficiency than other, competing chains. With decentralized exchanges on BSC offering lightning-fast swaps and extremely low fees, BSC has started to become one of the most widely used blockchains for Decentralized Finance (Defi). BSC uses a token protocol developed by the BinanceTeam called BEP-20. Known for 5-second block speeds much faster than doge with 1 minute block speeds. These 2 articles compare block speed:

Bep-20/BSC 5 seconds:

Advantages of the Binance smart chain are:

It's a proprietary blockchain, which will provide security and safety to all users and developers.

Its native dual chain interoperability will allow cross-chain communication and scaling of high-performance apps that require a fast and smooth user experience. It's EVM-compatible and will support all of the existing Ethereum toolings along with faster and cheaper transactions.

Its on-chain governance with Proof of Staked Authority consensus, built on 21 validators who validate the transactions, will provide decentralization and enable significant community involvement.

Ecosystem

Community-Powered

PandaFury is decentralized and owned by its fun, vibrant community. We welcome and embrace diverse perspectives to build PandaFury into the best community in crypto. With a do-good mission of helping save dogs in need.

Instant Rewards

For every transaction in the PandaFury network a 2% fee is distributed to existing holders. That means you earn more PandaFury just by holding it in your wallet. Watch your PandaFury grow every transaction!

Locked LP

Initial Liquidity tokens are burned and locked. Additionally, 5% of all transaction fees are added to liquidity.

Here you can view LP holders:

PandaFury Protocol

Baby Doge employs 5 simple functions: Reflection + LP acquisition + Burn + buyback + Development.

In each trade, the transaction is charged a 10% fee, which is split 2 ways.

2% fee = redistributed to all existing holders.

5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the PandaFury tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

3%+ of the total supply has been burned so far so 3%+ of the 1% redistributions are burned with every transaction.
